Digitalise business processes with professional workflow management

Complicated was yesterday!

The GBS AppDesigner is the future-proof solution for bringing business processes to life. From simple forms to complex business logic, the possibilities are endless. With the GBS AppDesigner, modern workflow tools make it easy to model business processes and newly created applications are platform independent. Whether in a web browser, directly in Microsoft SharePoint and Office 365 or in connection with IBM Domino and Connections: The AppDesigner feels at home everywhere!

With the flexible BPMN-conform workflow engine and the graphical Drag & Drop editor, sophisticated business processes can be created quickly, making it easy to get started with the GBS AppDesigner, no programming experience necessary. Thanks to modern web technology, business processes are available out of office, too.

About GBS

GROUP Business Software is a leading provider of solutions and services for the IBM and Microsoft collaboration platform.

More than 5,000 customers and 4 million users worldwide trust in the expertise of GBS.

Future-proof with platform independence

Consequent platform independence is the key to GBS AppDesigner's efficient workflow management. Our solution supports operation on premises as well as in the cloud. Giving you the flexibility you need to welcome the future.

Web-based & cloud

- Intuitive creation of workflows and business applications in the web browser
- Easy for employees in all departments to use
- Central management of applications and users
- Flexible operation from the cloud – Microsoft Azure ready
- Seamless integration of email contents in business processes
- Flexible price structure

SharePoint & Office 365

- Workflows and forms embedded directly in site collections
- Fewer system disruptions thanks to accessing of relevant data and processes within SharePoint
- Automation of standard tasks and business processes
- Supports SharePoint on premises and online
- No local installation of design tools necessary

IBM Domino & Connections

- Web enablement from IBM Domino applications
- Direct data storage in IBM Domino
- Usage of existing security and authentication mechanisms
- Reduced dependence on Notes Client through browser support
